This is an excellent and relatively unique compilation of all the really necessary-to-know facts about current metalforming practises and technology. It is an essential read and necessary companion-handbook for everyone involved in the metalforming industry from the steel mill through to service centers and right down to the fabricator. Operational as well as sales people will benefit from the knowledge and be brought up to date with current practises and thought on this subject in especially Northern America. It was rather expensive however, but one can understand that due to the specific and relatively small target market for this type of information, that there will be a cost to

the low volumes. Anyone in the steel industry will know what I mean!
