Macromolecular Design Of Polymeric Materials (Plastics Engineering)

Synopsis

Providing a range of information on polymers and polymerization techniques, this text covers the gamut of polymer science from synthesis, structure and properties to function and applications. It analyzes speciality polymers, including acrylics, fluoropolymers, polysilanes, polyphosphazenes, and inorganic and conducting polymers. The book examines the stereochemistry of polymerization and the stereoregularity of polymers.

Book Information

Series: Plastics Engineering (Book 40)

Hardcover: 896 pages

Publisher: CRC Press; 1 edition (January 2, 1997)

Language: English

ISBN-10: 0824794656

ISBN-13: 978-0824794651

Product Dimensions: 1.5 x 7.5 x 10.5 inches

Shipping Weight: 3.8 pounds (View shipping rates and policies)

Average Customer Review: Be the first to review this item

Best Sellers Rank: #3,503,901 in Books (See Top 100 in Books) #78 in Books > Science & Math > Chemistry > Polymers & Macromolecules #314 in Books > Engineering & Transportation > Engineering > Chemical > Plastics #985 in Books > Engineering & Transportation > Engineering > Materials & Material Science > Polymers & Textiles

Customer Reviews

"...the editors are to be warmly congratulated as they have captured 46 chapters of quite excellent material from experts in the field without even assembling the contributors for a meeting! Splendid reviews are given of living radical, living anionic and living cationic, group transfer, ring-opening and coordination polymerizations. . . . highly recommend[ed]. . . to all who are interested in polymer chemistry." ---Polymer News " . . . In addition to the well-written, clearly understood text, the numerous illustrations and over 2,500 references cited make this reference book an outstanding guide for polymer scientists, plastics engineers, materials scientists, and graduate students in these areas of study." ---IEEE Electrical Insulation Magazine
