# Geometric Programming For Design Equation Development And Cost/Profit Optimization: (with Illustrative Case Study Problems And Solutions), Third Edition (Synthesis Lectures On Engineering)

## Synopsis

Geometric Programming is used for cost minimization, profit maximization, obtaining cost ratios, and the development of generalized design equations for the primal variables. The early pioneers of geometric programming-Zener, Duffin, Peterson, Beightler, Wilde, and Phillips-played important roles in its development. Five new case studies have been added to the third edition. There are five major sections: (1) Introduction, History and Theoretical Fundamentals; (2) Cost Minimization Applications with Zero Degrees of Difficulty; (3) Profit Maximization Applications with Zero Degrees of Difficulty; (4) Applications with Positive Degrees of Difficulty; and (5) Summary, Future Directions, and Geometric Programming Theses & Dissertations Titles. The various solution techniques presented are the constrained derivative approach, condensation of terms approach, dimensional analysis approach, and transformed dual approach. A primary goal of this work is to have readers develop more case studies and new solution techniques to further the application of geometric programming.

## Book Information

Series: Synthesis Lectures on Engineering

Paperback: 212 pages

Publisher: Morgan & Claypool Publishers; 3 edition (December 27, 2016)

Language: English

ISBN-10: 1627059806

ISBN-13: 978-1627059800
