## Customer Reviews

Before becoming the 1st Memory Master Champion on FOX's Superhuman Show, Luis Angel Echeverria was struggling in school because of his bad ability to Focus and Remember. He had a 1.0 GPA his Freshman year and ended his Senior year in high school with a slight increase to a 1.75 GPA. He then went on to learn how to improve his memory from his memory coach and raised his grades in college to a 4.0 GPA! See what other things Luis Angel has accomplished by improving his memory and the memory of thousands of others who struggle with retaining information. \* 1st Memory Master Champion on FOX's SUPERHUMAN \* Founder and Main Memory Coach at AE Mind | Accelerated Empowered Mind \* Competed in the USA Memory Championship, Australian Memory Championship, Taiwan Memory Championship, Spain Memory Championship, and more \* Memorized a 120 digit number in 5 minutes with Perfect Recall \* Memorized a Deck of Cards in 2 min. with Perfect Recall \* Was the Youngest American to Compete in the World Memory Championship \* Coached the AE Mind Memory Team to a 1st Place Medal in the Numbers event at the USA Memory Championship \* Started AE Mind Memory Clubs in Los Angeles High Schools and in Universities such as UC Irvine and UC Santa Barbara. \* Speaker for Schools, Organizations, and Companies to help students and professionals have a "Better Memory Now" \* Author and Creator of the AE Mind: Better Memory Now Series

It's all about visualization to Luis, the power of creating a story. We are particularly good at this skill when we are children; we become creative story tellers. He brings about the understanding of how our forefathers would transfer knowledge their sharing stories. Luis seems to imply that various points in the brain are activated when we are taking in a story. It's frustrating to hear his perspective of the subconscious mind vs. the unconscious. As your conscious mind becomes the gatekeeper to the subconscious. I don't want to spoil the book for anyone, definitely worth every penny.

One of my favorite visuals that Luis Angel gave us was how the dynamite blew up the dominoes on the guy's strong arms. The root word was Dynamo and he said to picture that as Dynamite + Domino. The meaning is power or strength and that's where you get the guy's strong arms. As soon as I see that root word now, I instantly see the dominoes flying everywhere after being blown up. I think the book could have gone deeper into other topics. Perhaps there could be another volume that gives us more examples on how to use it across a variety of medical study fields.

I learned so much from this book. It was by far the most helpful medical terms book that I have gone through because of the various visual examples that Luis Angel presents here. The mnemonic triggers helped me learn the terms in a fraction of the time that it would have normally taken me.

was a gift for a nursing student she loved it

Excellent read for med school students who want to get a basic understanding as to how the prefixes, suffixes, and root words of med terms are memorized with metaphors.

If you follow Luis like I do, you know he's put in the work at what he teaches and you can see the amazing journey he's creating. Follow this guy and get his books and you'll improve if you put the effort into it...I have no doubt.

I am using these methods now and will be using them in my classroom to help my students to succeed. It seems easy to follow and has excellent tips on how to master the terminology.

The author gives an intro that has an extremely good method for memorizing unfamiliar or random

sets of items. But, past that, the list of mnemonics, specifically for medical nouns, functions, descriptors, is a) not the set of mnemonics and mnemonic acronyms common to medical professions (not, e.g. a list such as RICE- Rest, Ice, Compression, Elevation, for sprains) The list of mnemonics for memorizing, e.g. medical term prefixes, is SO colorful, near arbitrary and so divorced from the use and meaning of the term one is trying to memorize, that it is a counterproductive distraction FROM memorizing the terms. (Infra- below. Picture an infrared cat, under a table. This is the mnemonic for memorizing structures below the temporal cranium. There is so arbitrary a correlation between anatomical structures below the temporal cranium, and an infra-red cat under a table that by the time you've memorized the bizarre mnemonic, remembering the actual term, much less structure or function, or role in medical diagnosis or treatment is lost) Actually just learning common Greek and Latin roots, and anatomical location terms (supra, sagittal, posterior...), and using traditional medical mnemonics is a much much better way to memorize, and also to retain the medical sense of the material, rather than memorizing sheer random term-recall mnemonics) I would not wish to be treated by any medical professional who used this book as a medical study guide. That said, the introductory techniques are great for memorizing objects whose meaning or use is not of any direct functionality- eg, the technique is great for memorizing, say, names, or or unrelated sets of objects.
