# DK Workbooks: Science, Pre-K

## Synopsis

Perfect for preschoolers, this science workbook contains exercises that focus on the most basic principles of science, including the five senses, weather, seasons, baby animals, and more. DK Workbooks: Science is an innovative series of graded workbooks aligned to school curriculum that helps make learning easy and fun. Each title is packed with exercises and activities to strengthen knowledge from the science lessons taught in school. Developed in consultation with curriculum experts, these science workbooks reinforce learning and understanding of key concepts such as force and motion, materials, and ecosystems. A parents' section contains answers, tips, and guidance to provide support, and a certificate of achievement will reinforce confidence in kids by rewarding their accomplishments.

Average Customer Review: 4.4 out of 5 stars 65 customer reviews

Best Sellers Rank: #7,430 in Books (See Top 100 in Books) #25 in Books > Children's Books > Education & Reference > Study Aids > Children's General Study Aids #136 in Books > Children's Books > Science, Nature & How It Works

Age Range: 3 - 5 years

Grade Level: Preschool - Kindergarten

## Customer Reviews

I bought this for my 4,5 year old. Each page is dedicated to one topic. The topics covered by this workbook are simple enough for young children to grasp (which animals are fish, which animals are reptiles, mammals, etc.). At the end of the workbook there are answers and more guide for parents. Golden stars are a hit; really motivate my son. The only thing I don't really like is the glossy pages. Overall, nice book for science beginners.

Great workbook for homeschooling families. Simple explanations for little children to understand. This book covers living things, animals, seasons, senses, the human body and more. There are also a few simple activities for the little ones to try. It would have been nice if this book included more experiments for children to work on, but not a huge disappointment. I would recommend this workbook if you are teaching a child to understand beginning science concepts.

My 4 yo son really love this book! We used this book part of our homeschooling curriculum. I tore them so that I could make couple of copies for my son to practice. We do science subject twice a week, 4 pages per lesson. This book is easy to understand, fun, appropriate for the child's age and a good starting. Will definitely get another copy for kindergarten level. My son loves the gold reward stars too! :)

I purchased this Science workbook as well as their Geography and Math workbook. My 3 year old LOVES doing them and the concepts are so easy to explain to her that she catches on quickly. I do a few pages with her and then go back and review everything over with her to see what she remembers and what we need to go over again. These workbooks are a huge help as she is home with me all day and I want to make sure she's ready and confident for pre-school when the time comes. She also loves the reward stickers which help keep her interested in doing page after page. A lot more engaging and hands on than most pre-k workbooks out there.

Bought this book for my 3 year old to use at home. It is an excellent book, allowing the child to work through different concepts at their pace. It covers a nice variety of differences between animals, plants, weather and more. He and I also really like the pages that are experiments for the family to conduct. They are simple enough to pull off at our house but provide a lot of fun for him. It has spurred his interest in science and he now asks to do more experiments.

My three year old loves this book. We spend time together working through the pages. It is at just the right level for her. It's her favorite pre-k workbook by far. Even though it's small, it's lasted a very long time. Highly recommend.

I was thrilled to find a workbook in this topic! There is barely anything out there in this age group that's not math or ABCs. My daughter LOVES the subject and we got some great conversation and ideas from this!! I'm really thrilled about this. Great price too! The only downfall is that there's not

actually a ton of work IN the book - but there's lots you can build off of, and you can make much more out of what's on the pages than what the actual directions say. We cannot wait to start the experiments, so many great ideas! Overall, I'm very happy with the purchase!

This is a great beginner book. My daughter picked up concepts very quickly and requests to do this workbook frequently. I love that the science behind each topic is explained in very simple, age-appropriate , easy to remember/understand way.
